MONTHLY WEATHER MAP
CANADA

OCTOBER 1958

General Summary of Weather Conditions

OCTOBER 1958

October temperatures averaged below normal in Quebec, in the Atlantic Provinces and in the Yukon, and above normal throughout the remainder of Canada. Precipitation was generally below normal, with only the southern part of Quebec and a few areas of central Ontario, a small area of southern British Columbia, and southern Manitoba reporting surpluses.

Temperatures in the Province of Newfoundland were uniformly below the usual October values, with deficiencies of about two degrees in most of the Province, and four degrees from Goose Bay westward into Quebec.

Precipitation in Newfoundland was generally about twenty to thirty per cent below normal. Excesses of thirty to fifty per cent were reported however from Cape Race and from an area comprising the northern tip of the Island and south-eastern Labrador, including Goose Bay.

In the Atlantic Provinces, October temperatures were everywhere two or three degrees below the usual October values. There were several cool spells, one during the first week, another about mid-month, and a third about the 20th. There were few localities which had not experienced a killing frost by the 20th, and new low temperature records for individual dates were set on a number of occasions.

Precipitation in the Maritimes in October was also generally below normal, with deficiencies of twenty to thirty per cent in New Brunswick and fifty to sixty per cent in Nova Scotia. Prince Edward Island reported about normal precipitation, and there were excesses of about fifteen to twenty per cent in a belt of southern New Brunswick westward from Moncton to the Maine-New Brunswick border. Much of the precipitation fell as rain in the last week of the month. Most localities reported a trace of snow, but nowhere did this reach a measurable amount.

Temperatures throughout Quebec Province in October were rather low. Deficiencies were small in the south - about one or two degrees - but larger in the north, with temperatures four degrees below normal at Natchouan and five degrees below normal at Knob Lake.

Precipitation in the Province of Quebec in October was, in general, above average in the south and below average in the north. From Montreal eastward to Megantic, there were excesses of twenty to forty per cent, with a few stations near Montreal reporting excesses reaching eighty per cent. There were small deficiencies near Lake St. Peter and Quebec City. From the St. Lawrence and Ottawa Rivers northward to the Saguenay River and westward to Cobalt there was an area of above normal precipitation; excesses ranged from over forty per cent near Lake Temiskaming and Parent to about seventy per cent near Maniwaki. Deficiencies of twenty to fifty per cent were general throughout the remainder of the Province.

The areal distribution of temperature was rather spotty in Ontario in October, the average being a little above the usual values for the month. Temperatures were about normal along the St. Lawrence Valley and near Lakes Ontario and Erie, two degrees above normal near Lake Huron and Georgian Bay, and two or three degrees above normal in an area to the north and northwest of Lake Superior. Further north still, temperatures in northern Ontario were about normal, or a very little below, for October. The first week of the month was rather cool in southern Ontario, and there were early frosts in some areas.

Precipitation was below normal in most of Ontario in October. Deficiencies in southern Ontario averaged from thirty to fifty per cent. There were excesses of twenty to thirty per cent in a small area north and northeast from Lake Simcoe to the Ottawa River and to Lake Nipissing. In northern Ontario, precipitation was generally about thirty to forty per cent below normal. Falls increased toward the southeast, however, to about normal in the Kapuskasing-Iroquois Falls-Chapleau area, and there were surpluses of forty to seventy per cent in the region of Biscotasing and Cobalt. There were small surpluses also from Sioux Lookout northwest into Manitoba.

Temperatures in the Prairie Provinces were above the usual October values. Temperatures were near normal or a little below normal near the Manitoba Lakes and in a narrow belt westward into Saskatchewan, but elsewhere excesses ranged from two to four degrees. Temperature excesses generally increased westward, reaching five degrees in the vicinity of Red Deer and four degrees along the Peace River. Temperatures were low at the beginning of the month, but much higher later, with record low temperatures for some days

early in the month being succeeded by record high temperatures for other days in the middle and near the end of the month.

Except for much of the southern half of Manitoba, precipitation was very light in the Prairie Provinces in October. Although a small area southwest of Winnipeg had deficiencies of about fifty per cent, in general precipitation was above normal in southern Manitoba. Excesses were very spotty, varying from a few per cent to over a hundred per cent in some areas. North of the fifty-fifth parallel, precipitation was light; Churchill reported a deficiency of 73%. Most of Saskatchewan and Alberta had one of the driest Octobers on record, with deficiencies of eighty to a hundred per cent - Regina, with only .04 inch of rain recorded the driest October since 1902. Very little of the precipitation was in the form of snow. On the 9th and 10th, the Peace and Saskatchewan River Valley had the first significant snowfall, with 10 inches of snow at Grande Prairie and 5 at Prince Albert, but further south there was little or no snowfall, and by the end of the month only Churchill reported any snow cover, and that only a trace.

Temperatures in British Columbia averaged a little higher than usual for October. A few stations near the International boundary reported excesses of two degrees, but along the fiftieth parallel, temperatures were generally normal or a little below. Further north, temperatures were about two or three degrees above the usual October values. On Vancouver Island, temperatures were generally about two degrees above normal. New temperature records for some stations were reported for dates near the beginning and toward the end of the month.

Precipitation in British Columbia in October had well defined areas of surplus and deficiency. There were surpluses of forty to ninety per cent around Lake Okanagan and smaller surpluses westward to the Lower Fraser River, and along the Upper Fraser Valley. There were also excesses of forty to sixty per cent along the Pacific coast and on the Queen Charlotte Islands, and twenty to thirty per cent in the northwestern half of Vancouver Island. Deficiencies were measured elsewhere - twenty to fifty per cent along the Columbia River, along the Thompson River, and in the Middle Fraser Valley, and twenty to thirty per cent on the south coast of the mainland and in the southeastern part of Vancouver Island.

In the Yukon Territory, October 1958 was one of the most extreme on record, exceeding in some respects the cold October of 1951. The month began with above normal temperatures; on October 1 Whitehorse reported a maximum temperature of 65.9 degrees, the highest October temperature in the seventeen years of records at the airport. On the night of October 9-10 however, Whitehorse recorded a temperature of 7.7 degrees below zero - the earliest sub-zero temperature on record at Whitehorse. The mean temperature for the month at Dawson was 15.4 degrees, 12 degrees below normal, and the coldest October since 1900.

Precipitation was above normal almost everywhere in the Yukon in October - 86% above normal at Whitehorse, 200% at Mayo Landing and 64% at Dawson. Whitehorse reported 12.3 inches of snow - a new record for October, and almost three times the normal October snowfall of 4.4 inches.

Temperatures were also below normal in the Mackenzie Valley in October, with deficiencies of 2 degrees at Aklavik, 3 degrees at Normal Wells, and 3 degrees at Fort Providence. Eastward, however, temperatures were normal at Port Radium and Yellowknife. Over the remainder of the northwest Territories, temperatures were three to five degrees above seasonal values. The anomalies were at a maximum in Keewatin - six degrees above normal at Ennadai, and seven at Baker Lake. Only Clyde reported temperatures below normal - a deficiency of two degrees.

Precipitation was above normal in the western part of Mackenzie with excesses of twenty per cent along the Slave River, fifty to sixty per cent near Great Slave Lake, fifty per cent at Port Radium, and twenty to sixty per cent along the Mackenzie River. Northwestern Franklin had excesses of thirty per cent. There were excesses of 62% at Resolution Island and 164% at Frobisher Bay. The remainder of the Northwest Territories - eastern Mackenzie, all of Keewatin, and most of Franklin - had about one half inch of precipitation, a deficiency of thirty or forty per cent.

OCTOBER 1958

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
 MAX. The highest temperature.
 MIN. The lowest temperature.
 MEAN The mean temperature for the month.
 The remaining columns give the following information:
 PRECIP. The total precipitation in inches for the month including the

rainfall and the water equivalent of the snowfall.
 SUN The total hours of bright sunshine for the month.
 SNOW ON The depth of snow in inches lying on the ground at the end of the month (when reported).
 The use of (A) following the station name indicates that the meteorological observations are taken at Airport offices and (R) indicates that the observations are taken at Radio Range Stations not at Airports.
